Burrtec door sweep

RESEARCH

- Do not use in places where the temperature exceeds the operating temperature limit of 140°F (60°C).
- Do not mount in such a way that the filaments push against the floor excessively.
- Remove any dust or dirt that accumulates on the filaments.
- The lifespan of the brush depends on the frequency of use of the door. The gap prevention functionality of the brush deteriorates when the filaments start to separate. Burrtec recommends replacing the brush at this time.

- Do not excessively pull the filaments.
- Do not use in a place where the brush will catch easily.
- Only use on doors.
- Do not use for shutter gap prevention.
- Store in a dark place out of reach of children.
